Education

California State University, Northridge (CSUN) Expected May 2027
Bachelor of Science in Computer Science

- GPA: 3.2
- Relevant coursework: Introduction to Software Engineering, Data Structures, Advanced Data Structures, Computer Architecture, Computer Organization, Discrete Structures, Concepts of Programming Languages, Computer Network and Security, Automata

Technical Skills

Languages: Java, JavaScript, HTML, CSS, SQL
Frameworks/Technologies: React, Spring Boot, PostgreSQL
DevOps/Cloud: Docker, Render, Vercel, Neon PostgreSQL
Tools/IDEs: Git, GitHub, Visual Studio Code, IntelliJ, Postman

Personal/University Projects

Coinverse | React, Spring Boot, Docker, Vercel, Render, Neon PostgreSQL Nov 2025 - March 2026

- Built and deployed a full-stack currency converter supporting real and fictional currencies across a three-tier cloud architecture: Neon PostgreSQL, Render and Vercel.
- Implemented production security stack: JWT auth via HttpOnly cookies, rate limiting with Bucket4j, CSP/HSTS headers, timing-attack prevention and role-based access.
- Containerized Spring Boot backend with Docker, managed CI/CD pipelines, environment variables across cloud providers and resolved production connectivity issues end-to-end.

Road2CS | React, Spring Boot, PostgreSQL, Docker, Vercel, Render Jan 2026 - May 2026

- Spearheaded and currently developing a template-based roadmap app for CSUN students in a team of 5.
- Architected 10+ Java semester templates (4-year, 5-year and 6-year variants), built the React frontend, integrated REST APIs and handled all CORS and middleware configuration.
- Implemented and debugged Bucket4j rate limiting, configured SEO with Google Search Console.
- Developing the app with the potential for CSUN to take ownership and maintain it as a campus resource.

Skill Synth | React, Spring Boot, PostgreSQL Oct 2025

- SOSE hackathon 2nd place.
- Full-stack development of a skill-building app featuring user login/signup, RPG-style skill tracking and ML-generated learning recommendations.
- Collaborated in a team of 5 to design frontend, backend and database; delivered prototype MVP under tight deadlines.
- Designed frontend interfaces, implemented backend architecture and configured PostgreSQL database.
- Outcome: Focused on delivering a feasible MVP under tight deadlines; emphasized project scoping and scheduling for effective team workflow.

Work Experience

Walmart Frontend Cashier
Panorama City, CA | Feb 2024 – Feb 2025

- Provided fast and accurate customer service at checkout, handling cash and electronic payments.
- Assisted customers with product inquiries and returns, ensuring positive experiences.
- Managed transactions efficiently, minimizing errors and supporting smooth store operations.
